QC PATINA STAIN APPLIED TO QC COCONUT COLOR HARDENER BASE

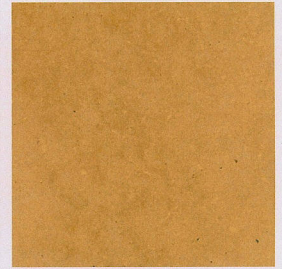

Neptune

Bluegrass

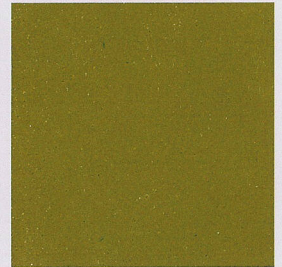

Ember

Buckwheat

Kodiak

Jade

Adobe

Blackfoot

PRODUCT NOTE: QC PATINA STAINS can be used over QC COLOR HARDENER, QC COLORTECH™ - E, and QC COLORTECH™.

LIMITATIONS: The above standard QC PATINA STAIN colors are shown applied to both uncolored (gray) concrete and to a QC COCONUT COLOR HARDENER base. However, QC PATINA STAINS produce unique effects to each individual concrete substrate and may differ significantly from the colors shown on this chart. QC PATINA STAINS will produce a wide range of finished colors depending on many factors including, but not limited to, finishing techniques, mix designs, curing practices, base color, surface porosity, and age and condition of concrete in existing slabs. There is an element of uncertainty and unpredictability inherent in the use and final appearance of QC PATINA STAINS including uneven, mottled or translucent effects. In particular, blue and green stains react to the presence of moisture and can create a black, spotty effect. Also, concrete that has been extremely hard-troweled may be difficult to stain. Before applying stain, it is strongly recommended that the stain be tested in an inconspicuous area. Refer to the QC PATINA STAIN Product Information Bulletin for additional information, application methods and product limitations.
